It is the first time that food insecurity in Latin America's largest food producer has surpassed the world average since the data tracking began in 2006, according to a new analysis of Gallup World Poll data released on Wednesday by the Getulio Vargas Foundation (FGV), a Brazilian academic institution. Brazilians are facing this dire situation even though the country is one of the world's top agricultural goods producers. Food prices have risen sharply following Russia's invasion of Ukraine, said economist Marcelo Neri, director of FGV's Social Policies Center and the study's author. "It is a worrying situation, the highest level of the series," Neri told Reuters. The increase in food insecurity among the poorest 20% in Brazil during the pandemic rose to 75% in 2021, from 53% in 2019, nearing levels in Zimbabwe, which has the highest level of food insecurity in the world at 80%, the data showed. The study also said that the gender gap in food insecurity in 2021 was six times greater in Brazil than the global average.
