SAO PAULO (Reuters) – The danger of going hungry in Brazil is increased than ever, as the share of individuals unable to afford meals for themselves or their household in some unspecified time in the future over the last 12 months rose to a report 36% in 2021, from 30% in 2019, a newly revealed examine confirmed.

It's the first time that meals insecurity in Latin America's largest meals producer has surpassed the world common for the reason that knowledge monitoring started in 2006, based on a brand new evaluation of Gallup World Ballot knowledge launched on Wednesday by the Getulio Vargas Basis (FGV), a Brazilian educational establishment.
