On November 4, 2021, people collect fruits and vegetables discarded by street vendors in Belem, Para state, Brazil. RAMUNDO PACCO AFP SAO PAULO - The risk of people unable to afford food for themselves or their family in Brazil has gone up to 36 percent in the last 12 months, from 30 percent in 2019 according to a newly published study.

According to a new analysis of Gallup World Poll data released on Wednesday by the Getulio Vargas Foundation, a Brazilian academic institution, it is the first time that food insecurity in Latin Americas largest food producer has exceeded the world average since the data tracking began in 2006.
