SAO PAULO - The risk of going hungry in Brazil is higher than ever, as the percentage of people unable to afford food for themselves or their family at some point during the last 12 months rose to a record 36 percent in 2021, from 30 percent in 2019, a newly published study showed.

The increase in food insecurity among the poorest 20% in Brazil during the pandemic rose to 75% in 2021, from 53% in 2019, nearing levels in Zimbabwe, which has the highest level of food insecurity in the world at 80%

It is the first time that food insecurity in Latin Americas largest food producer has surpassed the world average since the data tracking began in 2006, according to a new analysis of Gallup World Poll data released on Wednesday by the Getulio Vargas Foundation, a Brazilian academic institution.

Brazilians are facing this dire situation even though the country is one of the worlds top agricultural goods producers. Food prices have risen sharply following Russias special military operation in Ukraine, said economist Marcelo Neri, director of FGVs Social Policies Center and the studys author.

"It is a worrying situation, the highest level of the series," Neri told Reuters.
